

WIEHAG Takes Its World-Leading Timber Engineering to New Dimensions.

Founded in Altheim, Austria and now in its sixth generation of family ownership, WIEHAG brings visionary timber ideas to life across the globe. The results are efficient, sustainable, and architecturally striking.

With expertise that spans design, precision production, and project management, WIEHAG offers a fully integrated approach to timber construction. This seamless process makes it possible to deliver complex projects of the highest quality, from concept through to completion.

Flagship projects such as the Atlassian Tower in Sydney (188 m, hybrid timber), the World of Volvo in Gothenburg, NTU's learning hub in Singapore, the LIFE Campus in Hamburg, the LCW Logistics Centre in the Netherlands, and the Ascent Tower in Milwaukee show how WIEHAG is setting new global benchmarks in engineered timber construction.

For architects, developers, builders, and investors, timber is a material of the future. It stores CO₂, is recyclable and durable, and it stands out both for its visual appeal and for its proven benefits to health and wellbeing. High levels of prefabrication also mean faster construction times, assured quality, and greater certainty in planning.

WIEHAG is a forward-thinking and dependable partner — combining engineering expertise, entrepreneurial vision, and a passion for pushing the boundaries of timber construction together with its clients worldwide.
